Flexible
Mounting OptionsNeed to mount a piece of
equipment on the back of the rack
that would hit a traditional vertical PDU?
Solve this issue by mounting one PR-V7PI above and one below
the equipment. For a full front/rear rack with only a 1RU space
available, just rotate the unit and mount it horizontally. Link
multiple units together for plenty of controlled outlets.Removable Surge
Protection ModuleThe effectiveness of a surge
protector weakens with every
single surge. Instead of leaving
your devices vulnerable or
replacing the entire system any
time it takes a hit, a removable surge
protection module (MOV) allows you to
replace just the module. The app lets you see the
percentage of remaining life (Surge Hitpage) so you can
monitor the condition of the MOV for replacement.Manage Everything
from One AppAn intuitive app design provides a
simple user experience for
homeowners to manage connected
devices. Integrators can monitor
all of their clients within the MAIbase
app with the option of either remote
or direct access. Direct access
allowing integrators to login and
program the power strip
without internet.FULL POWER CONTROL & MONITORING
